

# Programming with Web APIs

---

This project aims to develop mashup based applications or applications separately by integrating web APIs such as RESTAPI, GraphQL API, or SOAP-based web services. This project integrates information from at least 5 different providers on specific topics or domains.

This document can help you run this project.

## Project Setup

The following commands are all run in the `programming-with-web-apis` directory.

### Install and Configures the Required Environment

```
1 npm install
```

### Compile and Hot-Reload for Development

```
1 npm run dev
```

### Compile and Minify for Production

```
1 npm run build
```
